Introduction:

This project is focused on customer account services in bank, so it is named as **"Bank Management System".**
This project is based on the management of the banking system for managing the entire bank process related to the customer accounts and to keep each every track about their various transaction process efficiently. The program mainly focuses on the manipulation of various function like creating account, withdraw/deposit account, delete account and so on.

Problem Statement:

In our daily life, we all need check and balance of the earning of every individual. We give and take cash on daily basis to each other and having this process on regular basis a person can forgot the information that's why there is a need for bank/customer accounts management system.

Proposed Solution:

Bank management system help user/customer to have a proper check and balance of their account or the cash present in their current account. It helps the user/customer to withdraw cash as per their convenience, deposit cash in the bank as a safe option to keep the money saved and also check the records of their current account.
